

Needful Provision, Inc. 2018- Annual Audit Report w/ 2019 Plans

As of 12 June 2018, NPI celebrated 23 years of successful charitable projects, in the U.S. and overseas. During this time period, NPI has concluded research, development, and testing of several innovative self-help technologies designed to help the poor better assist themselves. With this background, NPI is reporting projects for 2018 & planned projects for 2019. To wit:

1) Global Distance Education for Developing Nations: The project focus is on health, food security/ agriculture, and entrepreneurship training. Funding has been requested from USAID, for \$950,000., and from Aetna Foundation for \$750,000. NPI, at its own expense, completed and published an eBook on these subjects to assist with distance education efforts. A partner charity, the Unlimited Learning Center of Cortez, CO provides NPI with as-needed use of \$450,000 in advanced global distance education equipment for point-to-point broadcasts, worldwide.

2) Counterdesertification Demonstration for Kenya: A 1,200 acre demonstration and testing of NPI's advanced counterdesertification technologies to grow food, feed/ forage, fiber, niche, tree, and green energy crops on desert lands using available local water resources; e.g. water from Lake Turkana (in Kenya). NPI is hopeful that the GOK (Govt. of Kenya) will be able to obtain \$37 million in project funding from the World Bank (action is pending).

3) Tubal-Algalculture: NPI has perfected a system of growing algae in tubes to extract excess nutrients from streams, rivers, lakes, and glades to improve water quality and return nutrients to farms, while growing algal lipids for biofuels and algal high protein solids for livestock feeds and other uses. Prospective funding is ... USDA/ NRCS for \$180,000 and the Everglades Foundation may consider providing an additional \$250,000.

4) Model Diversified Farming Project: NPI is assisting 34 Montagnard (Asian) refugee farmers in Greensboro, NC, with a demonstration project and 9-acre urban farm with distance education features. NPI will provide \$15,500 for this effort, and another \$5,700 has been requested from The Community Foundation of Greater Greensboro, NC. (A generous couple in Greensboro, NC donated perpetual use of their 9-acres of farmland for this long-term effort.)

5) Apollo Publications: Printed NPI's eBook and hard copies of an Entrepreneurship training handbook for instruction of prospective entrepreneurs in developing nations. In addition, Apollo is supporting appropriate distribution of this material. To see this eBook please

do a Google search using the first word "ENTREPRENEURSHIP" followed by: 1) .pdf for Adobe; 2) .DOCX for Microsoft Word; 3) . MOBI for Kindle Format & Amazon; and 4) . Pub for others.

6) USDA/ FAS (Foreign Ag Service): FAS considered but then declined US\$35 million in commodities support for NPI's food security projects in both Kenya and Afghanistan. These commodities, if provided, would have been sold by NPI locally to help fund agricultural development projects in those nations. Political games at USDA and corruption within the two prospective host governments have delayed funding for these prospective efforts.

7) Compass Green: NPI and Compass Green jointly worked on a housing recovery project to assist populations of the Bahamas obtain safe, innovative, and hurricane-resistant homes after the loss of what that had due to the 2017 hurricane destruction. The Compass Green house designs proved to be inadequate to the task, and Nuttle with support from NPI developed a low-cost modular hurricane resistant self-sufficiency house (Nuttle's U.S. Provisional Patent No. 62/761,029). The GOB (Govt. of the Bahamas) indicates it may use Nuttle's design for a hurricane housing recovery effort funded with a World Bank loan, w/ first homes constructed by mid-2019.

8) Good Samaritan Food Pantry, Cortez, Colorado: In Cortez, a small City in SW Colorado, NPI is working to help said food bank provide foods 24/7/365 for nearly 600 impoverished and nutrient deficient residents in a community in financial crisis. NPI has asked USDA to fund an all-season greenhouse, with advanced heating, cooling, crop irrigation, and alternative power systems to produce large quantities of local, fresh, organic foods, all year-long, for the poor clients of Good Samaritan. In addition, NPI is asking the Domanica Foundation to fund the purchase of a USDA/ FDA certified mobile kitchen to safely process locally produced crops for this food bank.

9) Fraudulent Foreclosure Education: As part of its educational charter, NPI's staff worked with fraud and forgery experts to help identify and educate the public on the horrific fraudulent foreclosure practices big banks have been using to illegally take client homes, farms, and ranches using forged documents.

12) AgVet Instructional Project: A USDA \$330,000 grant is anticipated, for 2019, to start NPI's efforts to provide extensive agriculture training for military veterans seeking to farm..

13) Preparedness Systems Intl., Inc. (PSI) Supported Projects: NPI's affiliated for-profit, PSI, licenses and commercializes NPI's new technologies and pays NPI a royalty of 03 percent of PSI's annual gross income for use of these technologies. Using requested USDA SBIR grant

funds, PSI hopes to commercialize NPI's newly developed all-season greenhouse and biosecure, green poultry house. USAID may be providing funds to acquire same, in quantity, for Afghan farmers. The Islamic Development Bank (ISDB) has asked PSI to consider providing same to many farmers in Indonesia and Bangladesh with ISDB paying the costs for this effort. Thus, it seems that PSI is accelerating such commercialization efforts using NPI's new technologies.

14) NPI's Supplemental Efforts: See below.

. a) Additional 2019 NPI food security projects planned in 2018 for several urban farming demonstrations and related instructional efforts for Cortez, Colorado.

b) A 2018 NRCS agreed to fund a tubal-algalculture demonstration for the San Carlos Apache but this effort was cancelled by NPI when the Apache demanded control of all project funding. From past experience with Native tribes, NPI's staff had reason to believe this project would not be completed as a result of disappearing project funds. This demonstration project may be moved to Kenya in 2019, subject to World Bank funding for the project.

c) Based on NPI's President's, David A. Nuttle's, very successful experiences in the areas of counterterror and counterinsurgency, NPI grants him time as needed to provide instructions for U.S. Army Special Forces, Navy Seals, and CIA Special Operations personnel. Nuttle recently completed his 370-page classified memoir based on lessons learned from his unique special operations experiences such as those detailed in a book entitled "Vietnam's High Ground," by JP Harris. This supplemental effort supports NPI's educational charter and U.S. national security objectives, overseas.

Overview of Budgets: Like most charities, NPI seldom is awarded more than 20 to 30 percent of proposed projects. The NRCS grant was declined due to Apache demands to control all project funds. In 2018, NPI did not receive usual royalty income, from patents owned and licensed, as it has in the past. Thus, NPI's grant income and donations for 2018 totaled only \$224,700.00 (see NPI's Form 990 for 2018 for audited details). Most pending grants were delayed until 2019 with failed commodity grants from USDA/FAS having lost the potential to greatly increase NPI's project funding. As reported on NPI's Form 990s, NPI's Directors, officers, and most staff members are all volunteers who receive no salaries, benefits, or payments of any kind. Typically, over 95 percent of NPI's annual income goes to support NPI's charitable projects. See NPI's IRS Form 990, for 2018 for the recent financial documentation.
